COMPANY PROFILE

ZAD TECHNICAL TRADING & CONTRACTING

Steel Structures | Civil Works | Integrated Contracting Solutions

Strength in every structure.
Confidence in every delivery.

Salalah, Sultanate of Oman

About Us

> **Steel expertise and integrated project delivery led by one coordinated engineering and technical team.**

Based in Salalah, ZAD Technical Trading & Contracting delivers integrated contracting solutions with a core specialization in steel structures and the construction of warehouses and factories.

We coordinate structural steel with the associated construction and civil works under one organized scope, focusing on execution accuracy, clear coordination, and project requirements through handover.

Vision & Mission

> **We aim to build strong projects and lasting working relationships based on trust, clarity, and delivery.**

Our Vision

To become a trusted contractor in the Sultanate of Oman for steel structures and integrated projects, recognized for quality workmanship and dependable delivery.

Our Mission

To provide practical steel and civil solutions through a capable team, disciplined execution, and a consistent commitment to quality and safety.

Our Values:

- Quality
- Commitment
- Responsibility
- Teamwork
- Respect for client requirements

Steel Structures

> **Our core specialization for strong, practical facilities built around operational requirements.**

We execute steel structure works from reviewing approved requirements and drawings through preparation, fabrication, erection, inspection, and handover, with close attention to connection accuracy, alignment, and finishing quality.

Steel Components:
Columns, beams, trusses, frames, and platforms to approved project requirements.

Sheds and Workshops:
Structural frames for open-span buildings and operational facilities.

Canopies and Parking:
Practical steel solutions for external areas and car parking.

Extensions and Modifications:
Alteration and strengthening works based on site condition and scope.

Warehouses & Factories

> **Steel buildings that use space efficiently and support operations, storage, and future growth.**

We construct warehouses, factories, and industrial facilities with steel structures suited to the intended use and working area, while coordinating the related civil works for a connected project delivery process.

Functional Space:
Structural layouts that support movement, operations, and efficient use of area.

Future Flexibility:
Solutions aligned with approved expansion or development plans.

Coordinated Delivery:
Continuous coordination between the steel frame, foundations, and civil package.

General Contracting & Civil Works

> **Connecting steel and civil works under one coordinated scope improves efficiency across the project.**

We undertake general contracting, structural, and civil works for new developments and upgrades, helping reduce interface gaps and keep project stages aligned under one execution plan.

Site Preparation:

Preliminary works required before construction begins.

Foundations and Concrete:

Bases and concrete works associated with steel facilities.

Structural and Civil Works:

Project-related civil items coordinated with the steel package.

Finishing and Upgrades:

Maintenance, alteration, and expansion within the agreed scope.

Flooring & Epoxy Works

Practical flooring with a clean finish and performance suited to the site and its use.

We deliver flooring and epoxy solutions for industrial, commercial, and service environments, beginning with surface inspection and preparation, followed by the appropriate treatment and application system.

Sound Preparation:

A properly prepared surface supports a consistent, durable result.

Appropriate System:

The solution is selected around site condition and expected use.

Practical Finish:

A uniform appearance, easier maintenance, and suitable performance.

Artificial Turf & Padel Courts

Integrated solutions for organized, practical sports spaces ready for use.

Our scope covers area preparation and leveling, required civil works, artificial turf installation, padel court works, and related supporting elements within the agreed project requirements.

Site Preparation:

Leveling and preparing the base for the selected sports surface.

Professional Installation:

Dimensional accuracy, installation quality, and efficient use of space.

Complete Scope:

Coordination of civil and supporting works through project completion.

One Team.
Quality & Responsibility.

From planning to site execution, our team works in close coordination to protect project quality and time.

Engineering and Technical Team

Ongoing coordination between planning, supervision, and execution supports timely site decisions.

Quality and Safety

Careful execution, work inspection, and an orderly site approach aligned with each project's requirements.

Follow-up Through Handover

Monitoring work stages, coordinating teams, and confirming completion of the agreed scope.

Why ZAD Technical?.

We are more than a single trade -
we are a delivery partner that understands
the project and follows its details.

01

Focused Steel Expertise:

Steel structures are our core activity and practical strength.

02

Integrated Scope:

Steel, civil, and specialized works coordinated under one plan.

03

Clear Communication:

Direct follow-up and continuous coordination across project stages.

04

Delivery Commitment:

A clear focus on quality, scope, schedule, and a dependable result.
